

Northstar Labs — Capability Matrix

Document Type: Internal Knowledge Base

Data Status: Fictional / Demo Data

Sales Intelligence

Account Research Automation

Northstar can build systems that automatically collect publicly available information about target companies and convert it into structured research briefs.

Relevant when a sales team spends significant time researching accounts manually.

Lead Qualification

Northstar can build AI-assisted qualification systems that compare prospects against an organization's ideal customer profile.

Relevant signals include:

- Company size
- Industry
- Technology
- Hiring
- Growth
- Geography
- Product activity
- Business events

Sales Signal Detection

Northstar can identify signals such as:

- Hiring
- Funding
- Expansion
- Product launches
- Partnerships
- Acquisitions
- Executive announcements

These signals can be used to prioritize accounts or personalize sales research.

AI Agents

Northstar develops specialized AI workflows for:

- Research
- Classification
- Document analysis
- Data extraction
- Qualification
- Recommendation
- Content generation

Agents can be connected into multi-step workflows where each stage produces structured output for the next stage.

RAG

Northstar builds RAG systems that retrieve relevant internal information before generating an answer.

Typical architecture:

Documents → Chunking → Embeddings → Vector Search → Retrieval → LLM → Response

RAG is useful when a company needs AI to answer questions using proprietary information.

Automation

Northstar can automate workflows involving:

- CRM updates
- Data enrichment
- Research
- Document processing
- Reporting
- Internal knowledge retrieval
- Repetitive administrative work

Data Integration

Northstar can integrate:

- REST APIs
- CRM systems
- Databases
- Internal applications
- Web data
- Business tools

Best-Fit Problems

Northstar has the strongest potential fit when a prospect has:

1. A clearly identifiable repetitive workflow.
2. Significant manual effort.
3. Structured or semi-structured data available.
4. A measurable business outcome.
5. A workflow where AI can assist without removing human oversight.
